EDUCATION

East Point College Of Engineering And Technology

8th semester- 7.4(CGPA)

2022 - 2026

CMR National Pu College

Pre-University - 75.00%

2020 - 2022

Florence Public High School

10th - 83.00%

2018 - 2020

SKILLS

- Programming: Python, SQL
- Machine Learning: Scikit-learn, TensorFlow, CNN, Model Evaluation
- Data Analysis: Pandas, NumPy, Data Cleaning, Feature Engineering, EDA
- Visualization: Matplotlib, Seaborn
- Database: SQLite
- Communication skills
- Time management
- Leadership and teamwork

LANGUAGES

English

Hindi

Urdu

Kannada

PROFILE

Motivated AI and Data Science Engineering student skilled in Python, Machine Learning, Data Analytics, and Data Processing. Developed an MRI-based deep learning model for Autism Spectrum Disorder classification using CNN and TensorFlow, showcasing end-to-end AI system development. Experienced in data preprocessing, and building backend services with FastAPI, with a focus on database integration and deploying scalable AI-driven applications.

EXPERIENCE

AI Intern

Glowlogics Solutions | 2026 – Present

- Currently undergoing hands-on training in Artificial Intelligence, Machine Learning, and Data Analytics.
- Working with Python, Pandas, and Scikit-learn for data preprocessing, model development, and analysis.
- Building machine learning models and data-driven applications as part of practical industry-oriented projects.
- Gaining experience in data cleaning, feature engineering, and model evaluation techniques.
- Collaborating on real-world AI problem-solving tasks and project implementations.

NEUROSCAN AI – FINAL YEAR PROJECT

EPCET | 2025 – 2026

- Developed NeuroScan-AI, an AI-powered web application for early Autism Spectrum Disorder detection using MRI brain scans.
- Trained and optimised a CNN deep learning model using TensorFlow for multi-class ASD severity classification.
- Applied image preprocessing techniques such as resizing and normalisation to improve model accuracy and generalization.
- Built a full-stack system using FastAPI backend and interactive frontend for MRI upload and real-time predictions.
- Integrated SQLite database, secure authentication, and AI chatbot for user assistance and patient record management.

CUSTOMER SEGMENTATION USING RFM ANALYSIS

PYTHON | SQL | STREAMLIT | 2025

- Built a customer segmentation system using RFM (Recency, Frequency, Monetary) analysis on e-commerce transactional data.
- Performed data cleaning and preprocessing by removing missing customer IDs, cancelled invoices, and negative quantities.
- Used SQL aggregation functions (GROUP BY, COUNT, SUM, MAX) to compute customer-level behavioral metrics.
- Implemented RFM scoring using Pandas to classify customers into segments such as loyal, at-risk, and high-value customers.
- Developed data visualizations and an interactive Streamlit dashboard to analyze customer behavior and revenue contribution.
